	Water jacket package	70
	Boiler for solid fuel package	80
	Air conditioning package	80
	Fencing projects	140
	Septic tanks sealed package	bezpł.

Practical B house plan is a small family house for a family of four. This is a storey building with an attic. The same house plan we presented in two variants - as a family house for one family and the house divided into two premises - with two separate apartments on the ground floor and in the attic. This version of the house is the house divided into two premises - it is a great solution especially for families living together, for example, three-generation. Bottom flat may be occupy by the main family, on top of the house may live adult children with his/her family. Practical B house plan is simple in construction, and is not have complicated structure - thanks to this implementation costs will be reasonable. Common part of both apartments is a common entrance, boiler room and staircase with the hall. Apartment on the ground floor - two rooms apartment with kitchen and bathroom. In the attic you will find four-rooms (or three-room with separate kitchen). The building may be interesting for multigenerational families, it can also be a great idea for a holiday house - where at once, independently of each other can stay two families.
