Villa Nova is a luxury modern detached house for a family of 4-7 people. This very comfortable and spacious residence has everything you would expect from a comfortable house. The whole are designed in a logical, thoughtful way. Functional interiors compose here with good proportions of solid and consistent, minimalist aesthetic. Villa Nova, despite modern form, is restrained and warm. The villa has two faces: the front elevation of the house is discreet and monumental, garden elevation has lots of glass surfaces, with a conservatory between the interior with wooden patio, terrace and swimming pool. Large glazed of living room bring light into the house and the surrounding nature. The basic principles of forming the external appearance were the rhythm of the facades, and fine natural materials. Villa Nova gently speaks to the viewer by good taste. The interior of the villa is organized around a high-living room, which with the surrounding rooms on the ground floor and a mezzanine on the first floor creates a luxurious living space. The rooms are large, full of light, comfortable bedrooms with walk-in closets or large wardrobes. Number of rooms, bathrooms and utility rooms is optimal for each family. In addition, partitions can be freely adjusted by arranging the interior in their own way. Very good thermal insulation, mechanical ventilation with recuperation, solar panels, heat pump - all this means that the house is "green" and cheap to run. There is also available mirror version of this house plan.
